Strategies to support people with intellectual disability to participate in voting: Interim staff survey results

Ms. Sophia Tipping, Prof. Christine Bigby & Dr. Emma Bould
Living with Disability Research Centre
La Trobe University

Voting & People with Intellectual Disability

Human Rights enshrined in the UNCRPD

Article 29 – Effective & full participation in political and public life...

(i) Voting procedures, facilities and materials appropriate, accessible; (ii) Right of persons with disabilities to vote by secret ballot in elections & public referendums without intimidation...

People with intellectual disability are **less likely to vote** than other populations

(Keeley, Redley, Holland & Clare, 2008; Matsubayashi & Ueda, 2014)

Yet many have an **interest, sense of duty & desire** to vote & be heard

(Agran, MacLean & Kitchen, 2016; Bell & Horsler, 2003)

Significant gap in empirical research in Australia

Aims

Identify factors that facilitate & obstruct voting

Develop, trial & evaluate an initiative in Vic 2018

**In partnership with the
Victorian Electoral Commission & Inclusion Melbourne**

Methods – Overall Research Design

Mixed methods - Action Research

Phase 1 - Online Survey of staff in the disability sector

Phase 2 - Focus Groups with people with intellectual disability

Phase 3 - Stakeholder reference group to develop recommendations

Phase 4 - Implementation & Evaluation of an initiative for the 2018 Victorian State Election

Methods – Phase 1: Online Survey of Staff in Disability Sector

Aim

- Perception & experiences of staff in supporting people to vote

Data collection

- Online survey
- 70 closed & open items
- Piloted with stakeholders

Recruitment

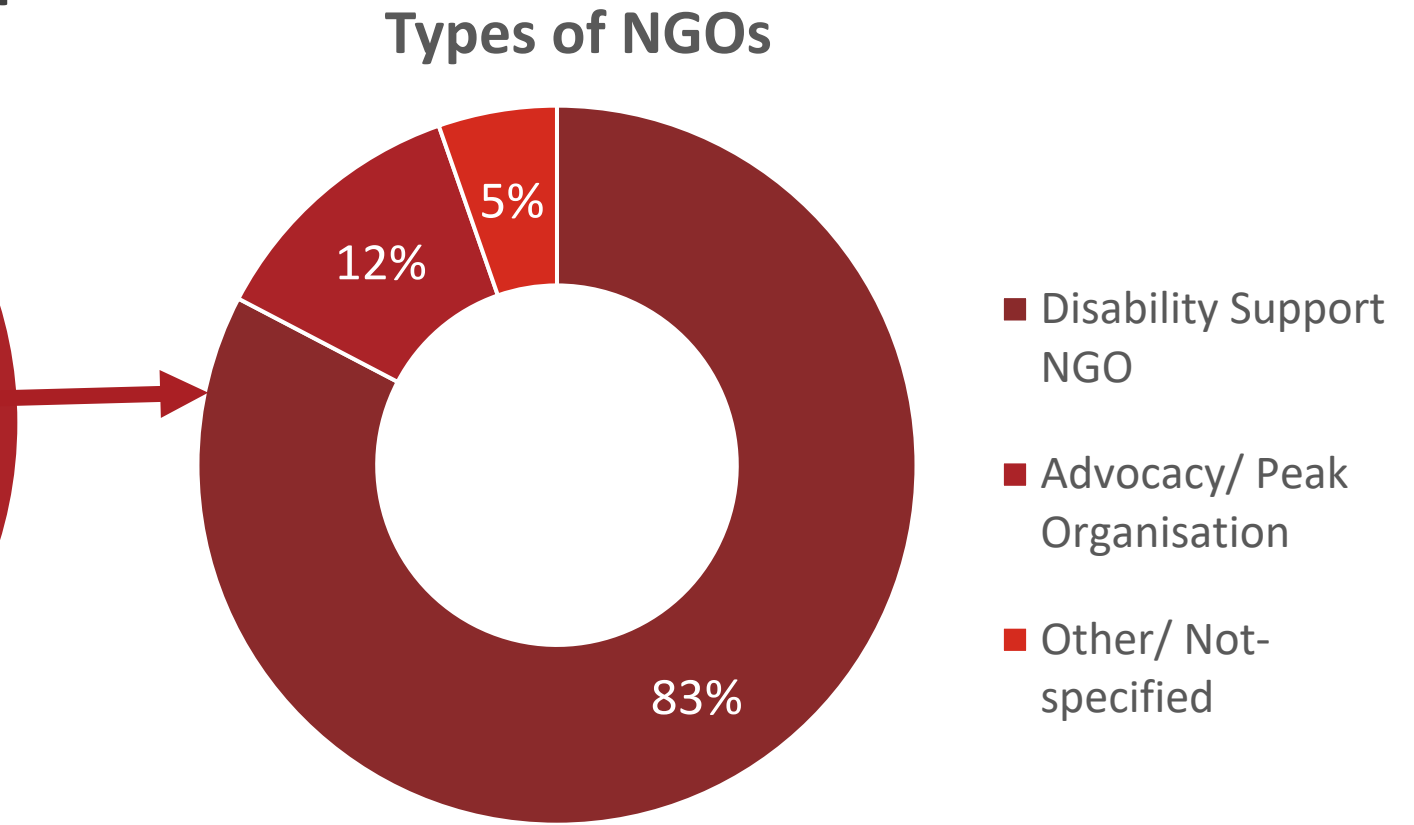

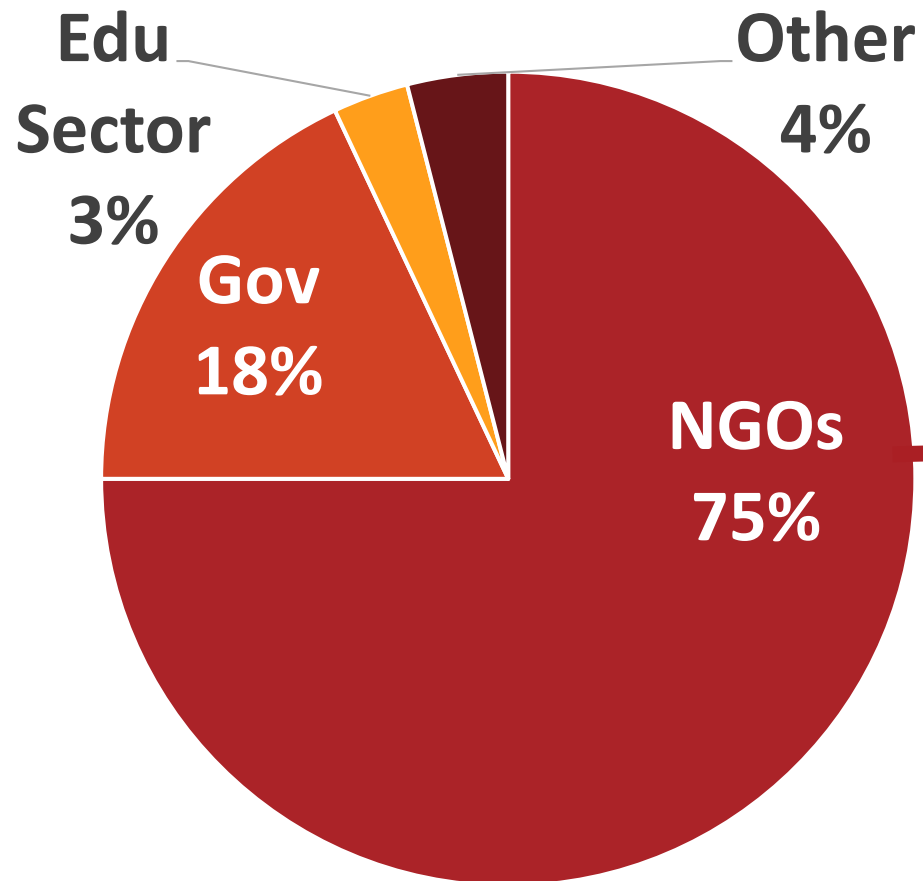

- Targeted various organization types & staff in various roles
- Advertising in newsletters
- Directly approaching organisations

Analysis

- Descriptive statistics
- Thematic analysis

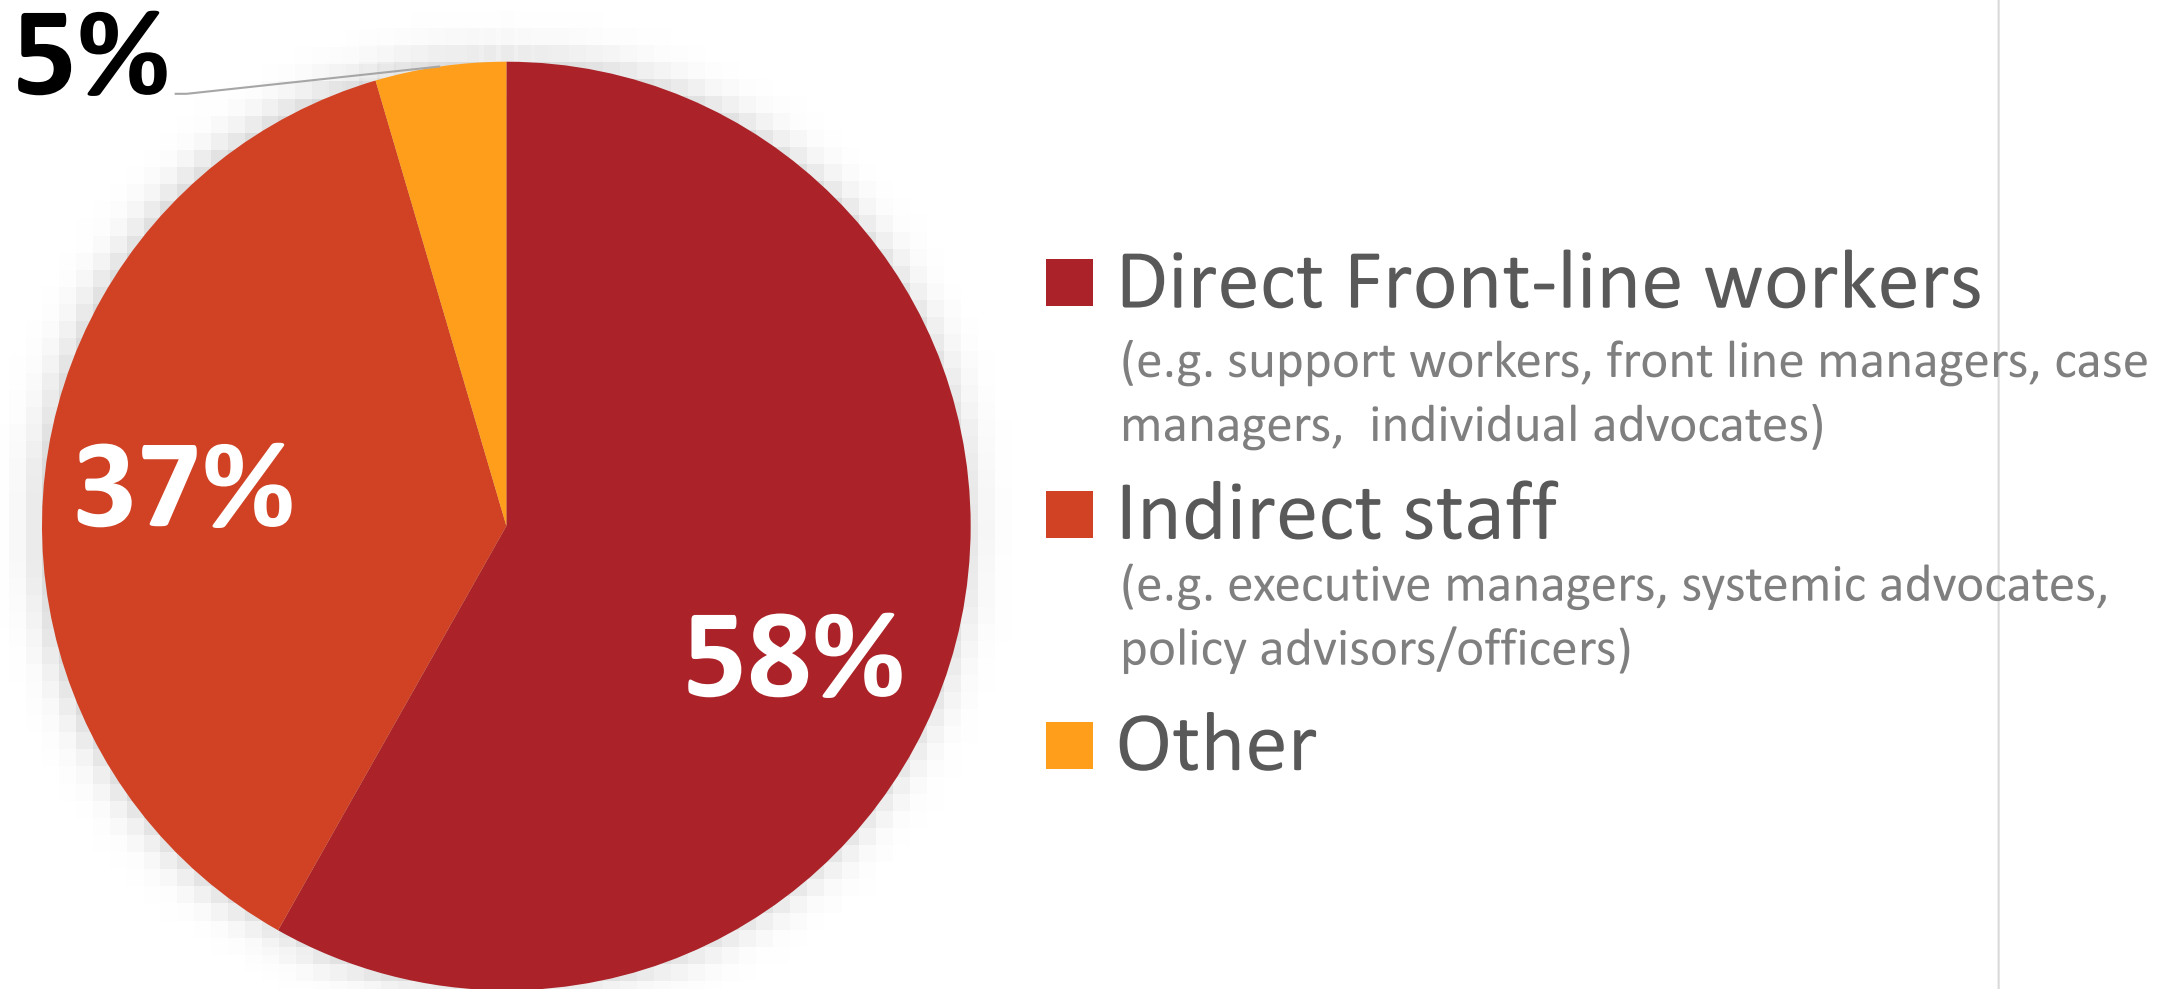

Participants - Organisations

- 157 respondents 102 completed **65% completion rate**

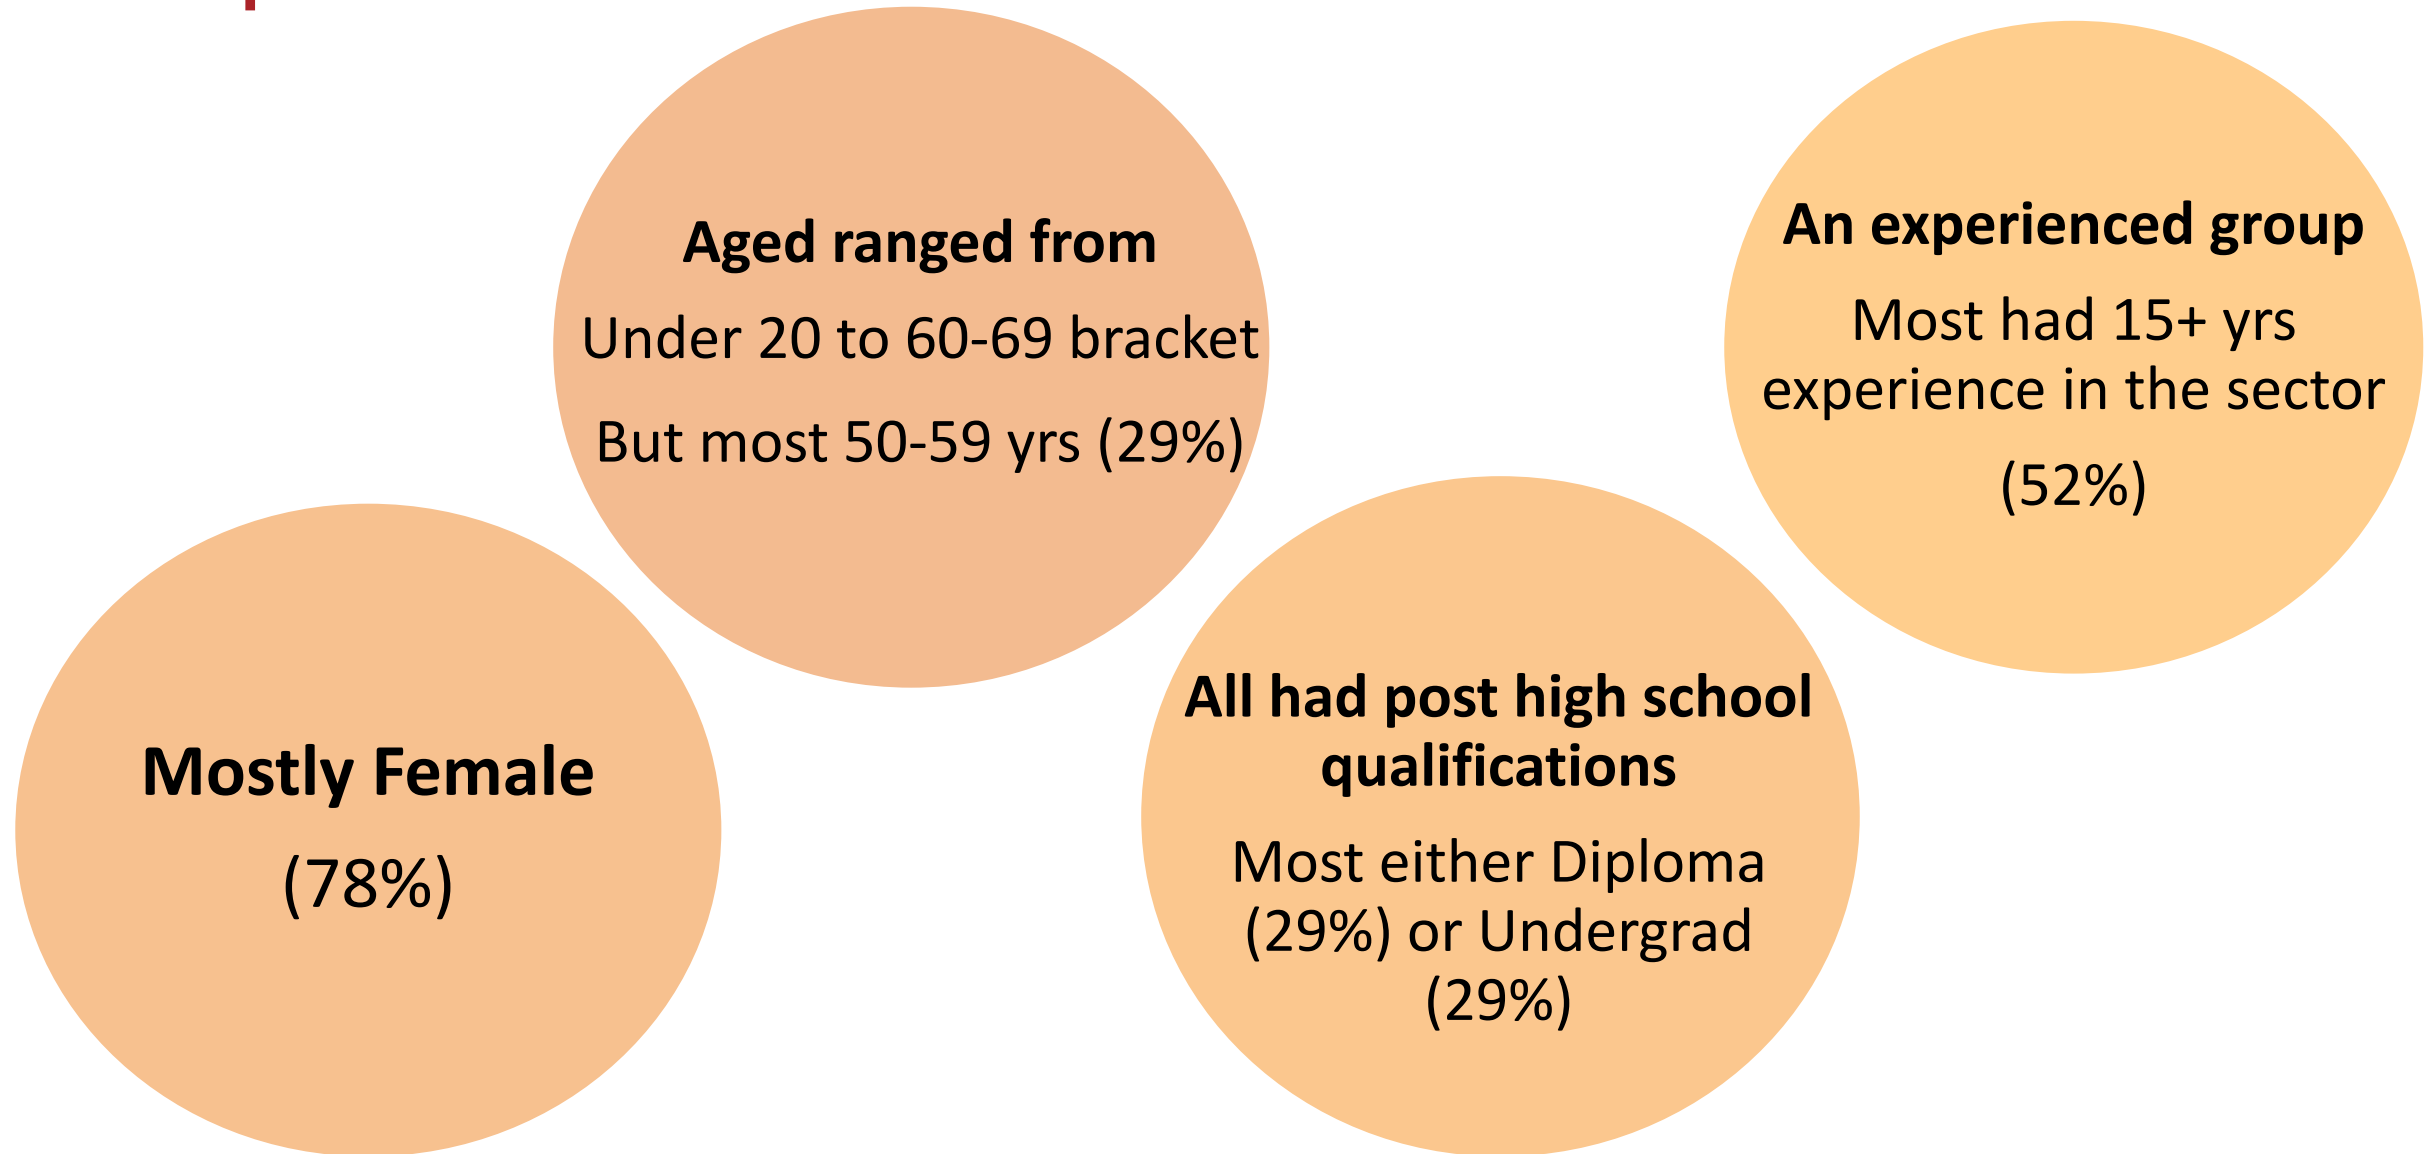

Participants - Roles

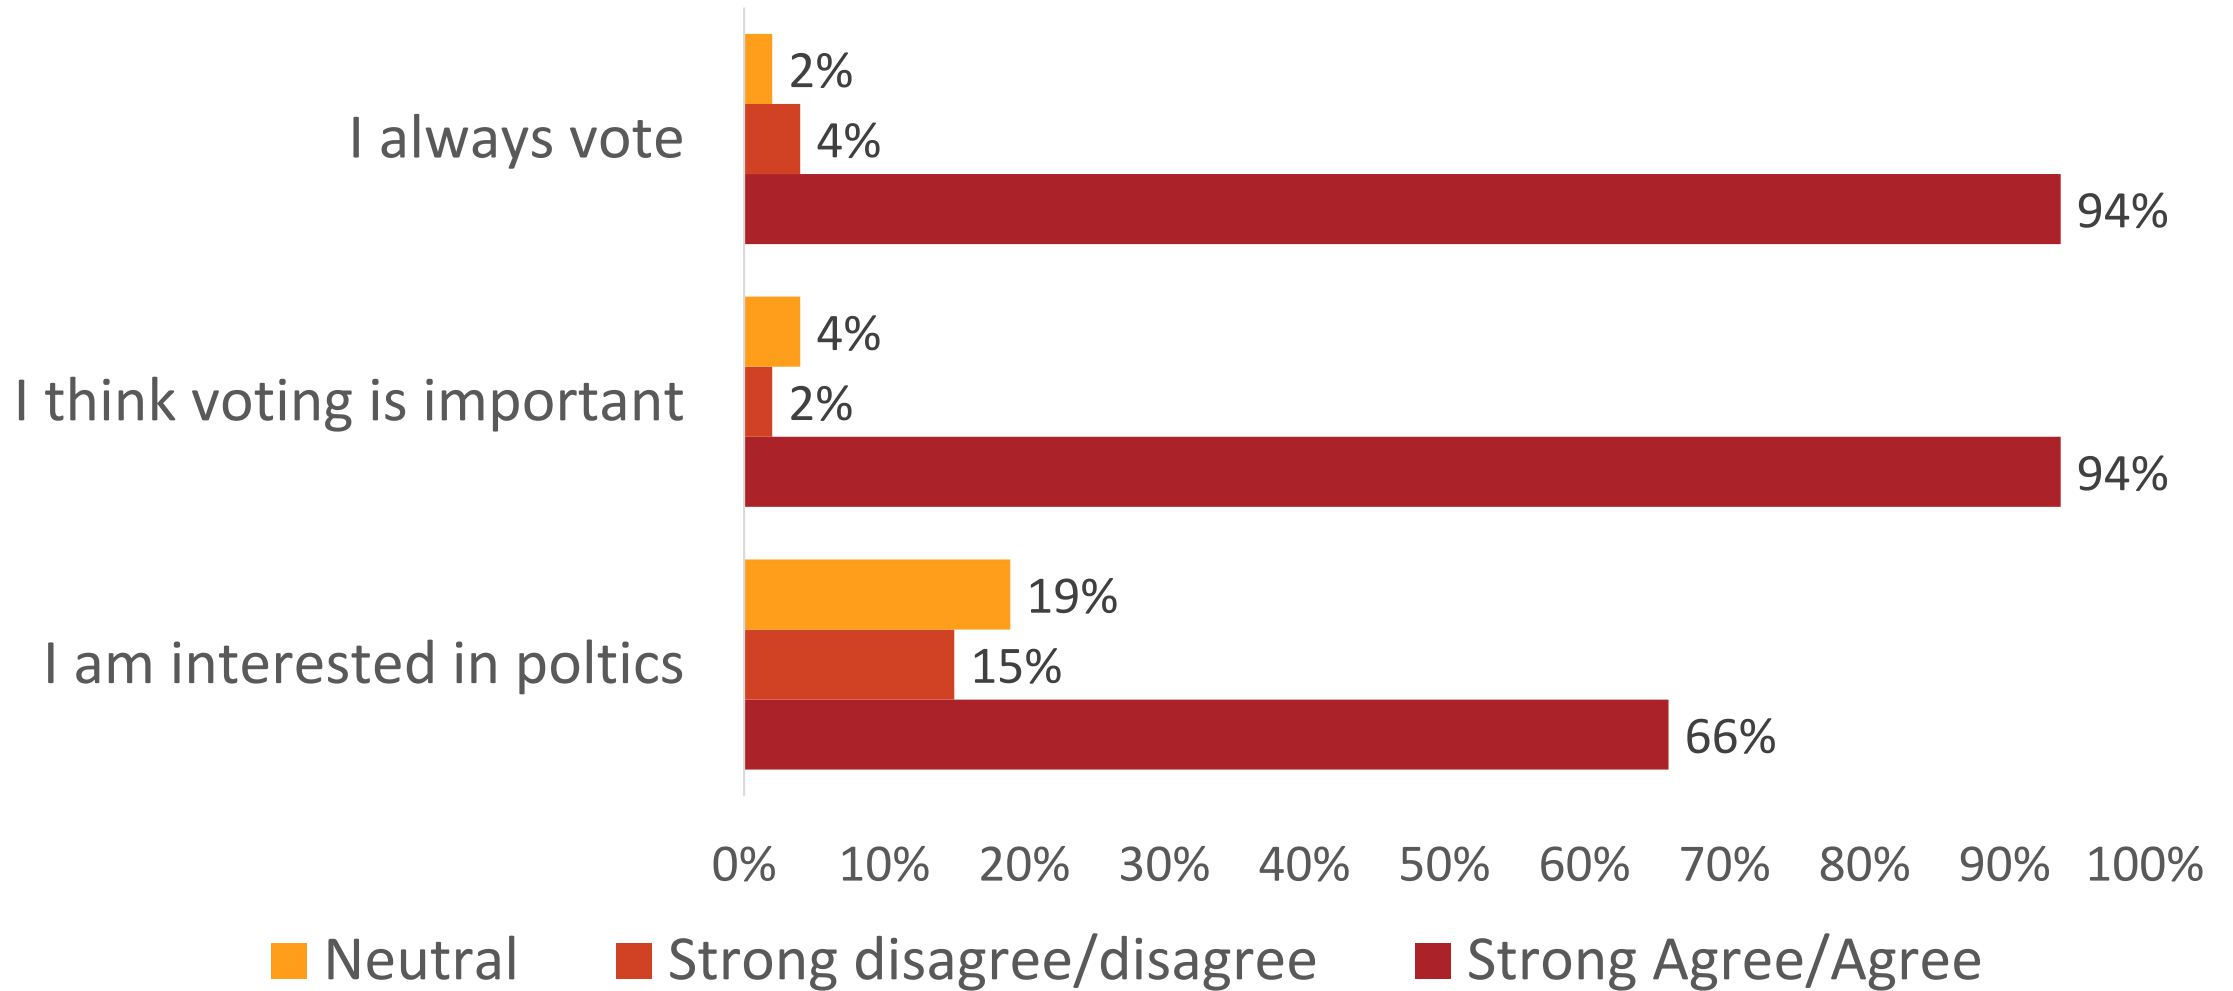

- Majority working on the front-line (i.e. direct support work, front-line management)

Participants – Most Common Characteristics

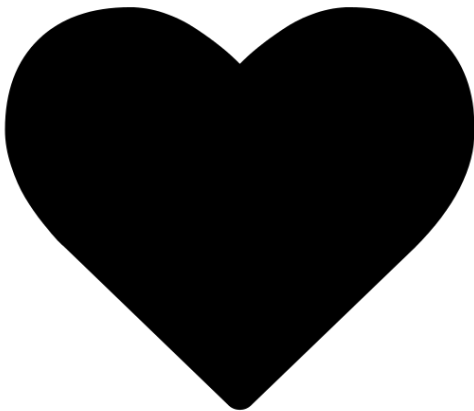

Participants – Personal Views Towards Voting

Findings – Phase 1

Good will

**Minimal
Action**

Uncertainty

Good Will Among Staff – Positive attitudes

- Strong belief that people should have the same right to vote as others.
- Regardless of level of disability.

Attitudes towards people with intellectual disability & voting

■ Strongly disagree/Disagree ■ Neutral ■ Strongly agree/Agree

People with severe or profound intellectual disability...

...have the same rights as everyone

...have the right to vote

People with mild or moderate intellectual disability...

...have the same rights as everyone

... have the right to vote

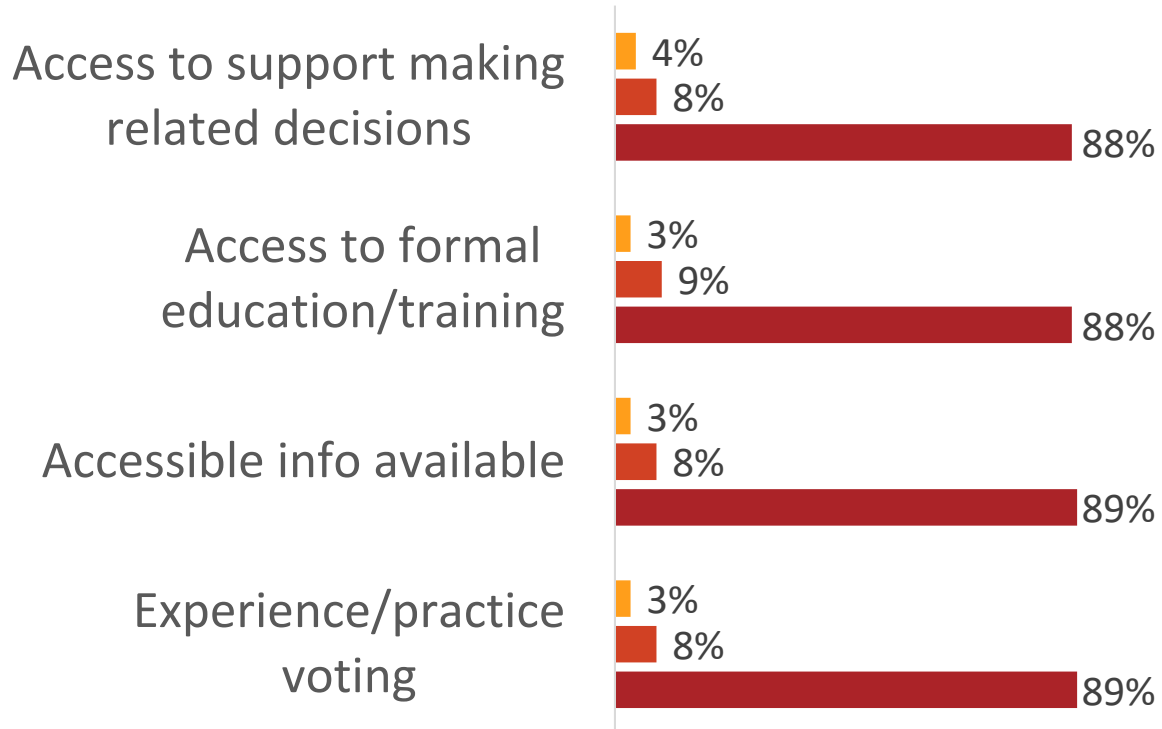

Good Will Among Staff – Practical obstacles

- Staff recognised the practical obstacles that get in the way of voting.

Obstacles BEFORE voting

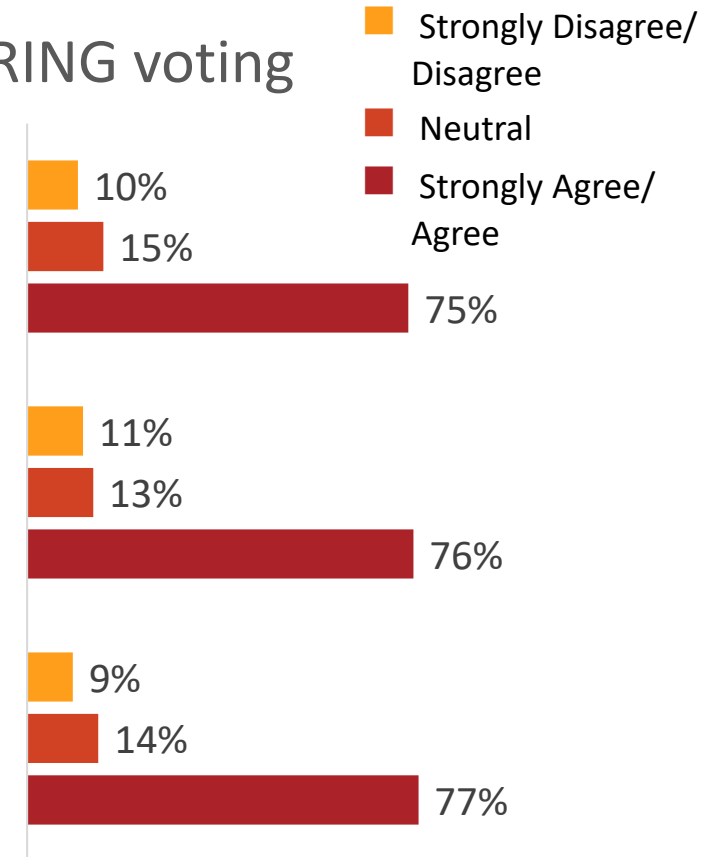

Obstacles DURING voting

Minimal support to complete voting process

Access to support at polling place

Accessible voting materials (i.e. how to vote cards, ballot)

Good Will Among Staff

- Staff also recognised the structural obstacles that get in the way of voting.

Widely held negative attitudes

“[The] **community’s negligence** in ignoring and/or undermining the value of all people.”

74% agreed that the **attitudes of others get in the way**

Impact of widely held attitudes

“People's **general life experience often reinforces an identity & self-belief that their opinion does not count** and they have little to offer.”

Changes to systems necessary

“it’s not the easy read that needs to change – it’s **the complicated process of voting**”

Findings – Phase 1

Good will

**Minimal
Action**

Uncertainty

Minimal Action - Front Line Staff

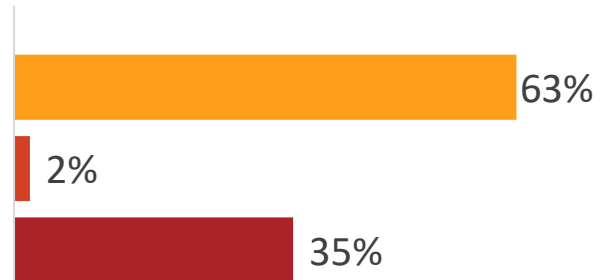

- Most direct front-line workers had not supported people to vote.

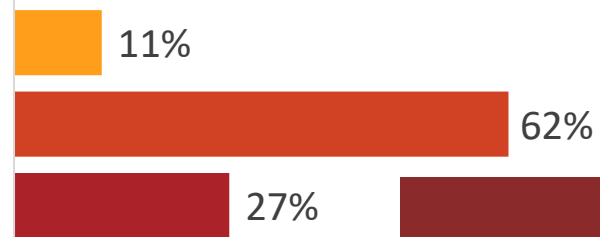

Direct Front-line workers

■ No ■ Unsure ■ Yes

Have you ever supported someone to vote?

...in recent Victorian or Federal elections?

Nature of support...

Before voting:

- Reminders & encouragement
- Completing paper work
- Casual conversations about how to vote, political issues & rights
- Advocacy with others

During voting:

- Completing the voting process
- Transport

After voting:

- Understanding results of election

Minimal Action - Indirect Staff

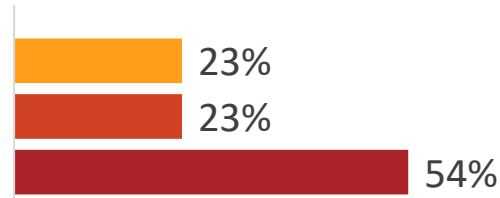

- Indirect staff had given thought to voting support.
- However, few had implemented initiatives - even fewer successfully.

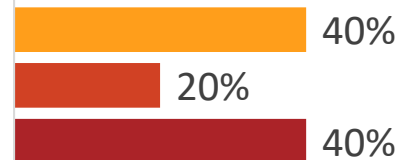

Indirect staff

■ No ■ Unsure ■ Yes

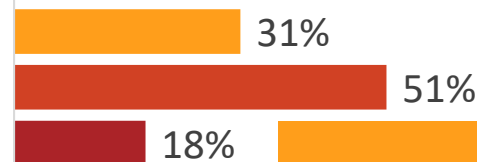

Has your organisation given thought to supporting people with intellectual disability to vote?

Has your organisation implemented initiatives to related to this?

...in recent Victorian or Federal elections?

Nature of Programs implemented

- On voting rights & how to vote (100%)
- On why to vote (85%)
- Education programs or info resources (57%)
- Policy & systematic advocacy work (14%)

Success?

“Now have a couple of people on electoral role & voting but less 1% of service population”

“Unsuccessful”

“Not successful”

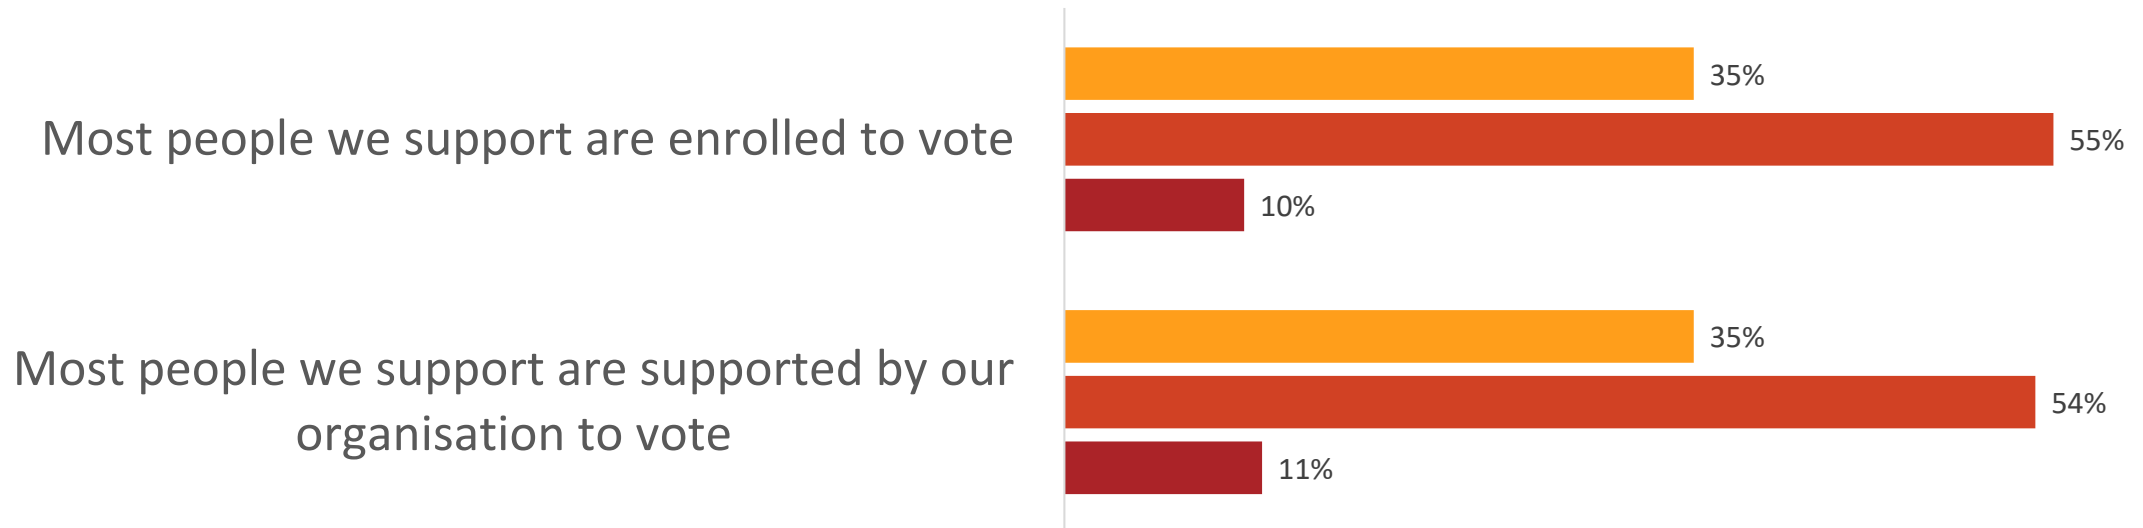

Minimal Action -

- Both direct & indirect workers were not confident that the people they supported:
 - were enrolled to vote, or
 - supported to vote

Confidence in voting support

■ Strongly Disagree/Disagree ■ Neutral/Unsure ■ Strongly Agree/Agree

Findings – Phase 1

Good will

Minimal
Action

Uncertainty

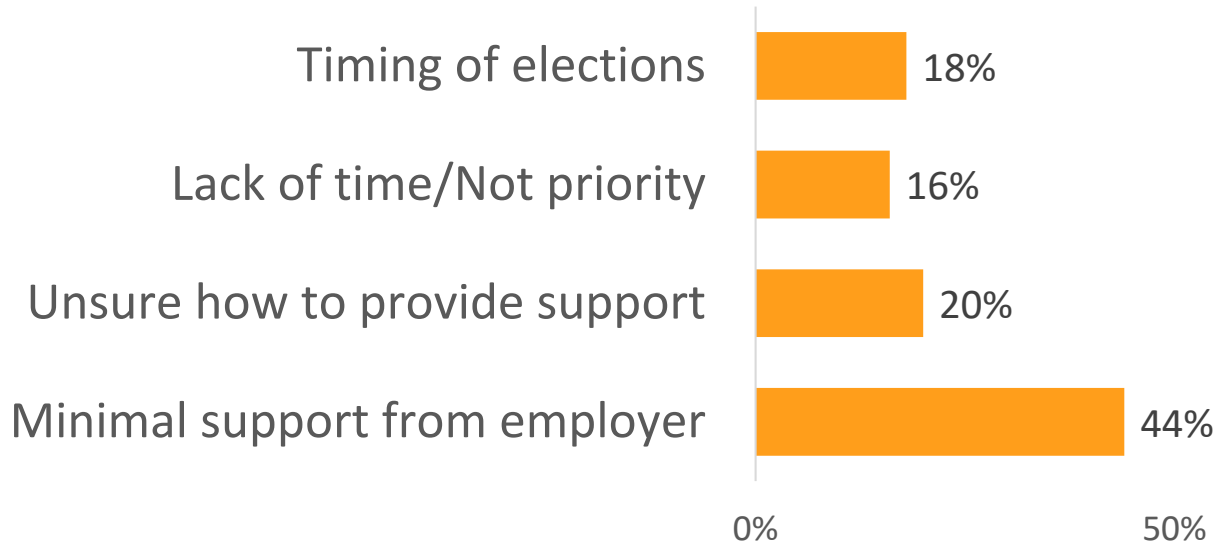

Uncertainty – Support & Influence

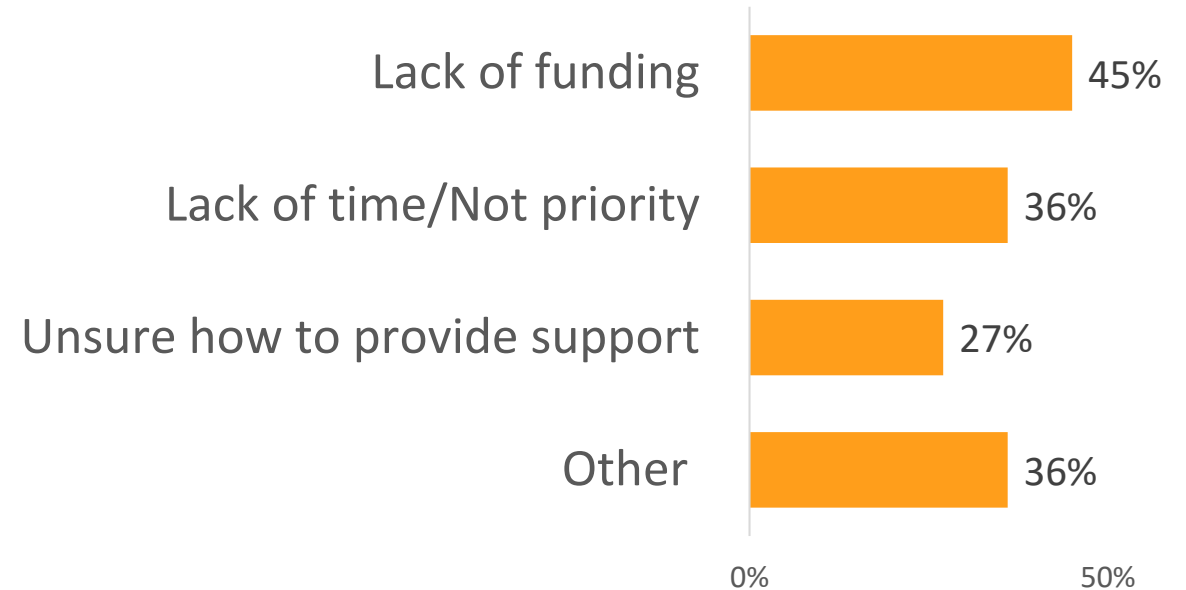

- No guidance about the role of direct supporters.
- Lack of funding, time priorities & uncertainty about how to provide support led to hesitancy.

Direct workers – Reasons for NOT providing support

62% had **not received related guidance** from employer

Indirect workers – Reasons for not implementing programs

Uncertainty – Support & Influence

Concern about undue influence:

“A lot of attention needs to be given to **ensuring carers/helpers don't influence** who the person votes for.”

“Often people with an intellectual disability are ... easily **influenced by factors other than the best Policies.**”

Uncertainty re how to support:

“How to support people is very difficult **without appropriate information targeting what ‘should be’ important to them.**”

Concern about level of disability:

“A lot of people with **complex disabilities will have little or no comprehension of the voting process** and its implication on their lives.”

Conclusions

Good will

**Minimal
Action**

Uncertainty

What's needed?

- The perceptions and experiences of people with intellectual disability
- Research needed into HOW to best support voting – especially people with high support needs
- Formal evaluation of programs & initiatives to support voting needed
